#### PUBLISHER AFFILIATED WITH

#### PUBLISHER AFFILIATED WITH

We dedicate this book to those who experience the tensions of studying and/or working on site or remotely and feel overwhelmed by their tasks. Their drives, determined by the market demands, have modified their essence, their natural features, and their life ideals. It is an opportunity to unveil, raise awareness and subvert such logic, demystifying it in relation to the global productivity control system. The reading proposes cure through Education, through Health education, through awareness of the meaning of Work and broad sustainability of globalized life in Society.

## Acknowledgments

This work was developed by three hands.

The first hand belongs to the student of the first class of the Education graduate program at the Doctorate level in the interior of Bahia. This proves that the interior is also a content productive force and that the interiorization of graduate programs must be set as a target by governors all over the country.

Rather than innovating, but with the intention of challenging a little the knowledge produced regarding quality of life, the interdisciplinary hand of a doctor who is also a lawyer and a system analyst cannot rest without thanking. Thanking the two other hands for the motivation, idealization and support shared in this project.

To Berta Leni Costa Cardoso, PhD, to whom I am grateful for more than the possibility of a surname. I thank and will always thank her for the generosity of being an incredible human being, unique not only in my life, but also in the life of our biological daughter and the countless relatives gained from the academia. Unique in the life of families, in Christianity, and in this society of the interior of the country. This work is also the fruit of this harmonious and eternal love between North and South. If anybody asks about the historical moment this author lived in, the answer is in her historical moment.

To Cláudio Pinto Nunes, PhD, I thank for the meaning given to my restlessness, for embracing the Education Science. I thank him for the motivation given to someone who really needed this opportunity to follow thinking, and continuing existing in the academia. On his behalf, I thank CAPES, the Government of the State of Bahia, UESB and all professors, students, and administrative staff of the PPGEd, who shared these reflections with us.

This first hand, a students' heart, also thanks the greatest reason to evolve as a human being, to continue learning to educate. I thank my daughter Maitê Costa Cardoso. I hope that in a link, on your digital shelf, in a book or in an article, you can meet me, always with a good talk about life, and the best quality I always wished for you. I must also thank my friends Dr. Pedro, Dr. Aliria, Pedrinho, and Bárbara Rizério. You are incredible beings in my life. Last, but not least, I thank my colleagues from the INRAD CENTER GUANAMBI, especially, the medical doctor, partner, and friend Ovidio Carlos Carneiro Villela for the trust and sympathy in the moments we have lived so far.

*Welton Cardoso Júnior*

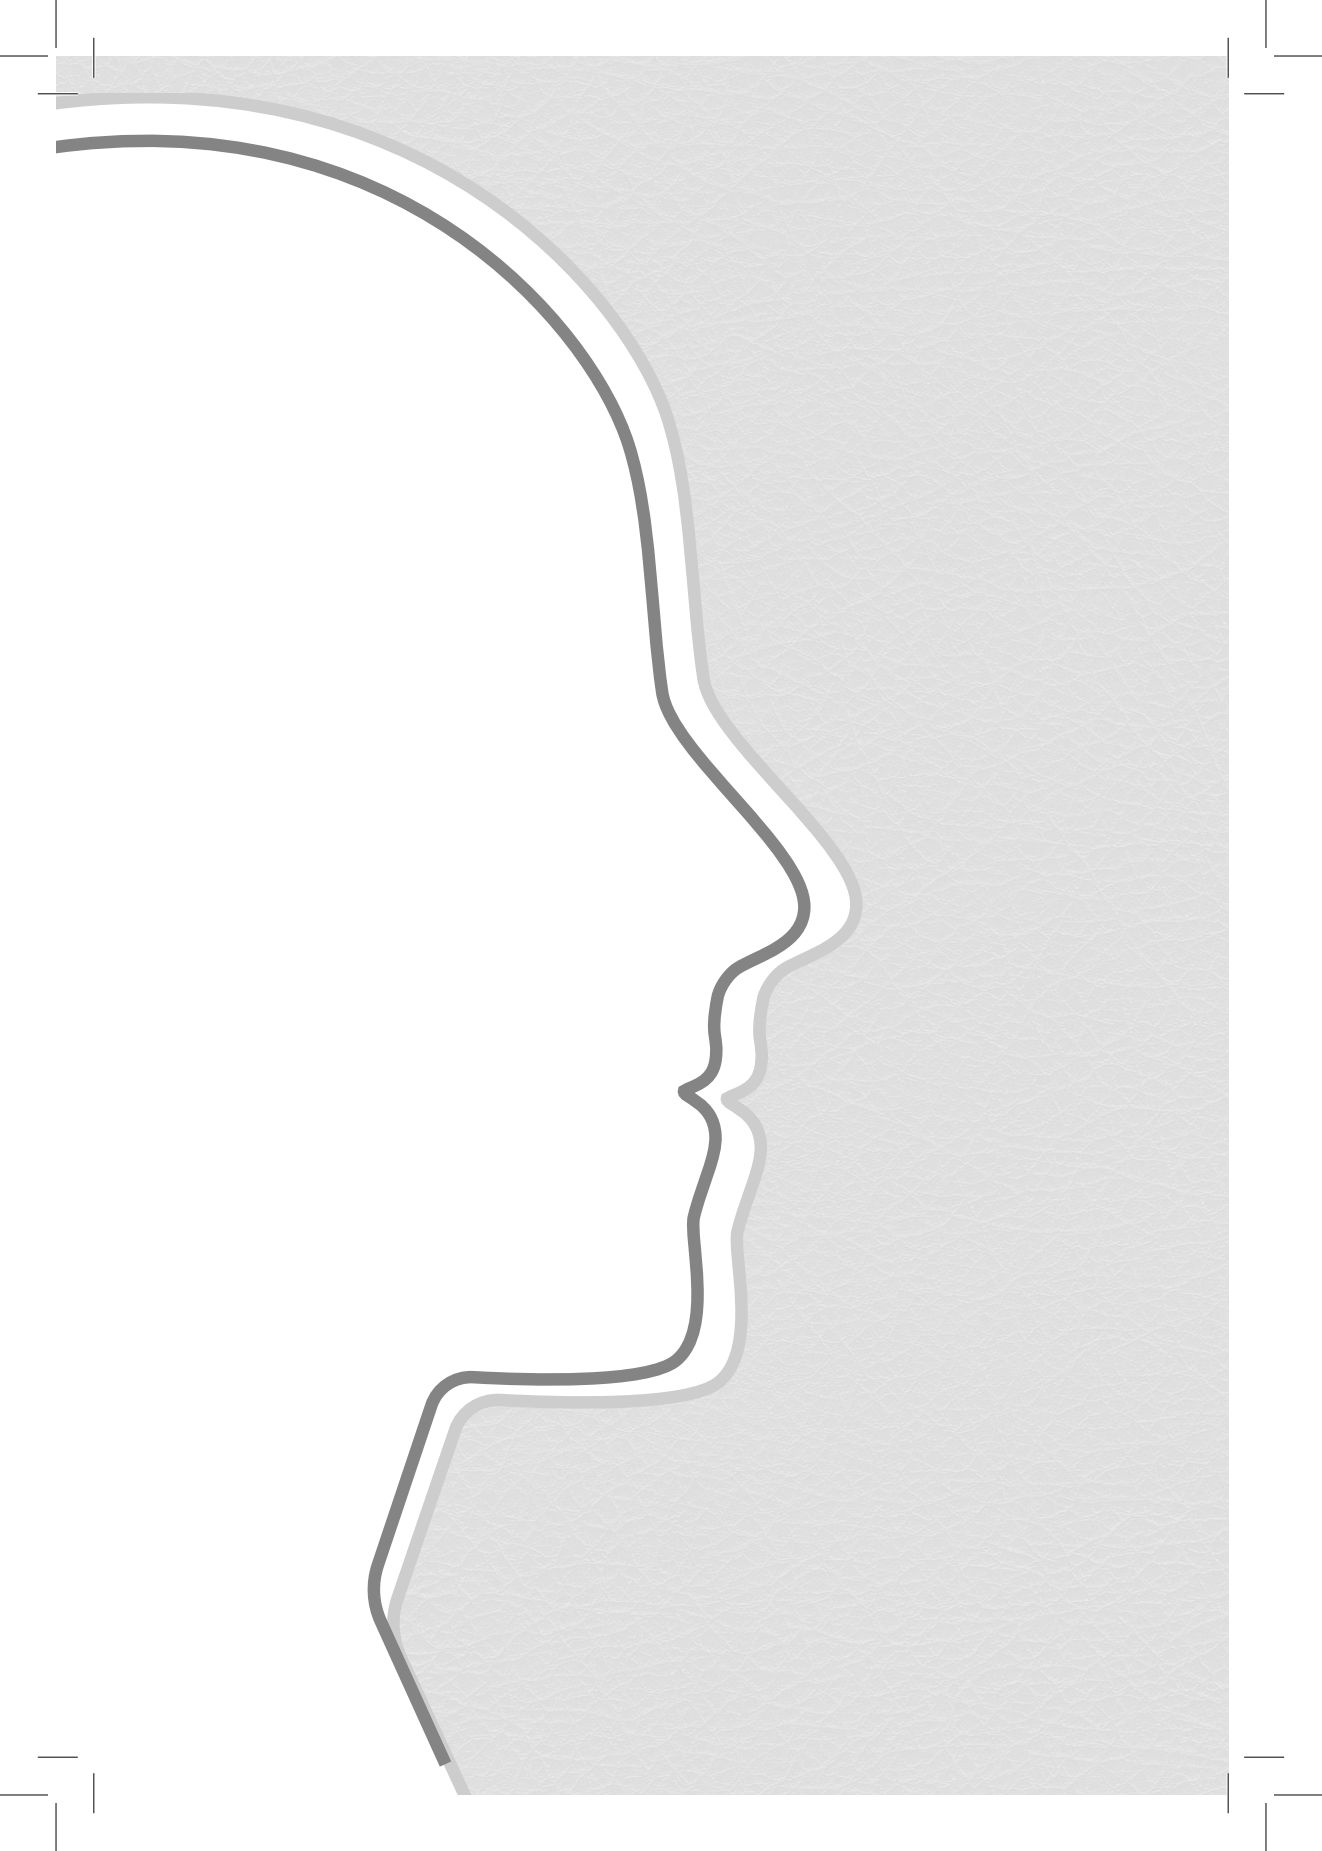

I thank my love, husband, life companion and partner also in my academic life. My partner in fights, achievements, dreams, and works. Our masterpiece is our princess daughter Maitê, the reason why we fight. My love, you literally saved my heart both physiologically and in the affective meaning of the word. Welton and Maitê you are the reason of everything. I thank my parents and siblings for the family base, my educators, colleagues, friends, and eternal students and advisees. You all made some contribution to the formation of this human being who is a work in progress. I have learned and always learn with you. I thank my friend, colleague and advisor in the post-doctoral program Cláudio Nunes, PhD, for the knowledge and experiences shared with wisdom and generosity. You are a role model and inspiration for all of us. I thank the colleagues from the University of the State of Bahia for sharing so much. I am proud of belonging to UNEB!! I thank the colleagues from the State University of Southwest of Bahia for their reception and coexistence.

*Berta Leni Costa Cardoso*

I thank the opportunity of having met two partners to face the challenge of reflecting on the quality-of-life theme. Within the scope of the Research Group on Didactics, Education, and Teaching Work (Difort/CNPq), the subtheme addressing the health conditions of education workers required some reinforcement with the discussion proposed by this book. When I was initially invited to advise Berta Leni Costa, PhD, in her post-doctoral internship and, later, to advise Welton Cardoso Júnior in his Master's and Doctorate courses, I met these two professionals interested in the interface of the health and education debate. I certainly realized the chance that life offered us to deepen our studies. I have surely walked and learned with both, gathering the elements that have strengthened my understanding that we are following the right path to continue learning. Taking that into consideration, this work presents the current stage of our learning about the theme discussed, and our promise to follow with this collective work, which might reunite many other individuals to produce the much-needed studies on quality of life.

*Claudio Pinto Nunes*

## SUMMARY

<b>Introduction .....</b>	<b>13</b>
<b>CHAPTER I – Quality of Life (QoL) and education .....</b>	<b>17</b>
1.1 Epistemology, Discourse, Theories and Approaches to Quality of Life .....	21
